Xerox iGen4XL™ Digital Press

We are pleased to announce that we have recently installed the award winning iGen4XL™ digital press, which produces litho like photo quality images, with technically advanced colour profiling for consistent results from the first print to the last. It's the perfect choice for designers & agencies producing high end collateral, direct marketing & photo speciality products.

Setting us apart from other digital printers is our EXTRA LARGE sheet size. Most digital presses can only print a maximum paper size of SRA3, that's 450 x 320mm. Our iGen4XL™ runs the largest sheet size of any digital press, a huge 660x364mm giving you the freedom & choice to produce a greater variety of design solutions in short, or long print runs.

Xerox 700 Colour Press Back up machine.
